

NEW: Profoto Pro-B MainsDock

The adaptor that turns battery packs into studio generators

Profoto, the world's leading manufacturer of photography lighting equipment, introduces a new accessory for its acclaimed series of battery packs – the Pro-B MainsDock.

The MainsDock makes it possible to connect Profoto's popular Pro-7b 1200, Pro-B2 1200 and Pro-B3 1200 AirS battery packs to the mains. The MainsDock replaces the actual battery and allows continuous operation of the generator. It even supports a 250 W continuous model light, when used with a Pro-B2 or Pro-B3 generator.

The MainsDock automatically adjusts its voltage to any mains in the world, and the unit is certified for international travel. It also boosts an active cooling device, which guarantees that both the MainsDock and the generator stay cool during even the fastest, most dynamic shoots.

The MainsDock has a rugged and solid design, which makes it perfect for rental use as well as demanding studio work. The generator is securely fixed by a magnetic pedal, but it is very easy to assemble and disassemble.

Previously photographers had to choose. When buying, they had to choose between the mobility of a battery pack and the endurance of a studio generator. When renting, they had to choose between outdoors and indoors equipment. Now they can have it both ways.

Deliveries of the Profoto Pro-B MainsDock start immediately.

Technical Specifications

Pro-B Mainsdock with	Profoto Pro-7b 1200	Pro-B2/Pro-B3 1200
Recycling Times	0.12s-3.3s	0.06-2.8s
